EXAMINER'S AMENDMENT

Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Craig P. Wong on 09/08/2004.

The application has been amended as follows:

- A) In line 7 of claim 36, "the" has been deleted.
- B) In line 9 of claim 36, "of the tool" has been changed to --between the portion of the drive system and the surgical end effector--.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: None of the prior art of record teaches or fairly suggests the robotic surgical tool of claims 13, 19, 23, 27, 31 or 36. Concerning claim 36, Jensen et al. and Chader et al. fail to teach the limitations of the claim either alone or in combination. While the teachings of Chader et al. overcome some of the shortcomings of Jensen et al., they fail to disclose at least "circuitry mounted on the probe, the circuitry transmitting a signal via the interface to the processor that indicates tool calibration offsets between the portion of the drive system

Art Unit: 3732

and the surgical end effector.” Chader et al. does teach a memory module which may be “preprogrammed with a wide variety of initialization information including... the local XYZ coordinates of the work portion or other reference location on the instrument... the local XYZ coordinates for each of the energy-emitting elements...” However, none of the information preprogrammed into the memory module expressly enables the memory module to transmit “a signal via the interface to the processor that indicates tool calibration offsets between the portion of the drive system and the surgical end effector”; wherein “tool calibration offsets between the portion of the drive system and the surgical end effector” provide to the processor at least information pertaining to nominal relative position of the surgical end effector and driven elements; and a measured relative position of the end effector and driven elements. (further clarification may be obtained through reference to the present specification)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
